(54) 【考案の名称】 水泳用ゴーグル

(57) 【要約】

【課題】 着用時に眼窩周囲に自然に密着して快適であり、且つ顔部の動きによっても隙間を形成せず水を進入させない水泳用ゴーグルの提供。

【解決手段】 レンズを収容するリム、リムを接続するブリッジ、リムに接合された保護パッドを具えた水泳用ゴーグルにおいて、保護パッドが異なる厚さとされ、接顔の一侧に異なる平面が設置されて眼窩の周囲に密着し、さらに、保護パッドが各個人の眼窩周囲の共通の特性、即ち上下の眼窩の凹凸落差及び鼻梁近くの凹みを基準として保護パッドの異なる厚さが形成され、並びに接顔の一侧が上下の眼窩の異なる位置によって傾斜し、凹凸落差と凹みを埋め並びにその傾斜度に適合し、着用時に自然に密着して快適な効果を達成し、且つ顔部の動きによっても隙間を形成せず水を進入させないことを特徴としている。

Abstract (Translation)

< Topic > When wearing, sticking naturally around the orbital, it is comfortable. And offering of the goggle for swimming which does not form the opening at the same time with the movement of the face and does not make the water penetrate.

< Solution expedient > A goggle for swimming which has the rim accommodating the lens, the bridge connecting the rim and protective pad connected to the rim, comprising :

the thickness where the protective pad differs, the plane surface being installed which differs to one side of contact to face and stick around the orbital, furthermore, A different thickness where the protective pad is formed depending on the common quality around the orbital of the individual, namely the orbital unevenness head of the top and bottom and the dent of the nose beam vicinity and incline depending on the position where one side of contact to face differs the orbital of the top and bottom, burying dent and the inclination conforming to degree, sticks naturally when wearing and achieves the comfortable effect, it does not form the opening at the same time with the movement of the face and it features that the water is not made to penetrate.

Abstract(Translation)

[Object] When wearing, sticking naturally around the orbital, it is comfortable. And offering of the goggle for swimming which does not form the opening at the same time with the movement of the face and does not make the water penetrate.

[Means to Solve] A goggle for swimming which has the rim accommodating the lens, the bridge connecting the rim and protective pad connected to the rim, comprising : the thickness where the protective pad differs, the plane surface being installed which differs to one side of contact to face and stick around the orbital, furthermore, A different thickness where the protective pad is formed depending on the common quality around the orbital of the individual, namely the orbital unevenness head of the top and bottom and the dent of the nose beam vicinity and incline depending on the position where one side of contact to face differs the orbital of the top and bottom, burying dent and the inclination conforming to degree, sticks naturally when wearing and achieves the comfortable effect, it does not form the opening at the same time with the movement of the face and it features that the water is not made to penetrate.
